TITLE: Seismic wave filtration by fractures (in a single-dimension medium)

SOURCE: Ref. zh. Geofizika, Abs. 6D119

REF SOURCE: Tr. V Sessii Uch. soveta po nardonokhoz. ispol'z. vzryva.
Frunze, Ilim, 1985, 299-307

TOPIC TAGS: seismic wave, phase velocity, seismic wave filtration, jointing,
fracture filtration, seismic wave propagation, periodic structure

ABSTRACT: The effect of jointing on the propagation of seismic waves is determined by means of electrotechnical analogies developed by B. N. Ivakin. Mechanical and electrical models of jointing and fractured structures are given, and an analytical solution for a periodic structure is obtained. Graphs are included on phase velocity and the logarithmic decrement of absorption as a function of fracture intensity. A. Levshin. [Translation of abstract]

TITLE: Practical application of an inductive sensor to measure linear displacement

SOURCE: Sdelovaci technika, no. 10, 1965, 389

TOPIC TAGS: electronic component, mechanical engineering

ABSTRACT: The article describes the design of an inductive sensor to measure changes in linear dimensions. The apparatus can be used to measure the dimensions of parts subject to change by the action of temperature or friction during processing, etc. The linear stability is better than 40.001 mm and the linearity is good. Orig. art. has: 3 figures. [JPBS]

KLEMBOVSKIY L.

V 2279. Klembovskiy, L., *Notes for evaluation of ring-shaped reinforcements in calculation of the strength of a tube subjected to the action of internal pressure* (in Russian), *Dokl. Akad. Nauk SSSR* (IV) 1, 3, 107-111, 1953; *Ref. Zh. Mekh.* no. 10, 1957, Rev. 11877.

The results of the author's work regarding the calculations for a ringed tube, working under internal pressure, are briefly described. The case is examined of the ring fitting of the rings without preliminary expansion. The solution of the given problem, as also the basic equations, are known (for instance, S. P. Timoshenko, "Plates and shells," Gostekhizdat, 1948). S. M. Sokolov

"Salmonella typhimurium - Causative Agent of Enteric Salmonellosis in Calves on a Dairy Farm."

Belgrade, Veterinarski Glasnik, Vol 17, No 4, 1963; pp 339-344.

Abstract [English summary modified]: In a large dairy farm, 7 calves died in quick succession from obscure enterotoxic syndrome despite oxytetracycline; finally found to be S. typhimurium, isolated from spleen of 4 dead calves and also from 2 of 4 rats caught in barn but not in specimens from litter from the 73 cows and heifers. Of the 44 calves, 26 were sick; 7 died and another 16 had to be slaughtered as runts. In litter of 17 calves organism was also found. Chloramphenicol, disinfection and deratization apparently cured epizootic. Exhortations to exterminate rats. Five Soviet, 5 Western and 5 Yugoslav references.

✓ Propionic acid bacteria as inhibitors in the prevention of ropiness in bread. M. Bilić, S. Klemenc, and T. Stanić (Chem. List. "Boris Kidrič," Zvezd. 82, 1, Ljubljana, Yugoslavia), Dost. s. Godiš 10, 66-6 (1966). — $\text{Ca}(\text{OAc})_2$, 0.2-0.5%, when added to yeast or leaven dough was effective in inhibiting ropiness in the baked bread for 8-12 days. Ca propionate, 0.2-0.5%, inhibited ropiness for 3-4 weeks, although mold formation was only slightly reduced. AcOH , 0.2-0.5%, while inhibiting ropiness, was found overly acidifying. Propionic acid, 0.1-0.15%, gave best results, even after 18 days of bread storage. Bacterial cultures, having produced concn. of 1.2-2.5% of propionic acid, were added at 60 ml./kg. of flour and gave excellent results even after 28 days of storage, at which time the test was discontinued owing to other aging effects of the bread. For the inhibition of mold formation, a propa. contg. 20% dehydroacetic acid in gelatin was brushed onto the oven-hot bread and found highly effective for 7-10 days. E. E.

Title : A Polarographic Study of the Monocarboxylate Complexes of Lead.

Orig Pub: Croat Chem Acta, 30, No 1, 99-101, (1958) (in English with a Serbo-Croat summary).

Abstract: The polarographic method was used in studying complex formation in aqueous solutions of Pb^{2+} and NaAc (where Ac = formate (I), acetate (II), propionate (III), butyrate (IV)) $[sio]$, n-valerate (V), iso-valerate (VI), monochloroacetate (VII), and glycolate (VIII) up to HAc $[sio]$ at Ac concentrations of 0-3M in the presence of $NaCl_4$ (added to maintain the ionic strength at a constant

Polareographic study of the monocarboxylate complexes of lead. I. Stability constants. V. Klemencic and I. Piliš. (Univ. Zagreb, Yugoslavia). *Chem. Abstr.* 51, 20716 (1958). The half-wave potentials and diffusion currents of aq. solns. of the formate, acetate, monochloroacetate, propionate, butyrate, α -valerate, and iso-valerate complexes of Pb were detd. by means of Leybold polarograph; and their stability constants, which are tabulated, were calcd. by applying the DeFord-Horne graphical method (C.A. 46, 19066). II. Influence of concentration of monocarboxylate on the diffusion current. *Ibid.* 53-22. A correlation of diffusion currents and viscosity coeffs. of the solns. from the previous paper shows an agreement with the combined Stokes-Einstein-Ilkovich equation. N. Plavšić.
